#### Additional Pages other than milestone 1

- There have been a lot of changes in the milestone projects.
- We added several new pages.
  - Cart
  - Login
  - Signup
  - Checkout
  - Firebase page
- We added hover effects on the page.

All the pages have been completed which were left in complete in milestone 1.

#### Challenging part

However, mastering a new language is a challenging endeavor in and of itself. Due to the fact that we had just a rudimentary understanding of react.js, there were several obstacles in our path. It was challenging to convert the whole project from HTML to React, but as soon as we got started, things began to go more quickly. During the process of connecting to Firebase, the data that was on the pages did not reflect in the database. It took us some time, but in the end we were successful in locating the source of the issue.

## REFLECTIONS

We all picked up many different skills and knowledge on our own. When we first began the process of changing the website, we split up the pages into the group's hands, and we got to work. We were all in the same boat, but since we were converting pages in our own ways, we each learned new information and found solutions to new challenges, and then we assisted one another when we ran into the same issue. It was an enjoyable endeavor, and we discovered a lot of new things and improved our ability to collaborate with others at the same time.

### Contribution

While making the project every member gave equal contribution .
